

NEW! Finger Scan Bundle!

Revolutionize Your
Attendance Tracking!

SES PROGRAMS

The most reliable, accurate,
and safest way to track attendance.

Innovative Finger Scanning Attendance System (FSAS) uses biometrics to safely and accurately identify each student.

The time and costs of manually taking attendance, creating paper rosters, entering attendance data, and comparing electronic invoices to paper rosters can be significant. Inaccuracies in invoices can lead to valuable financial resources being diverted from the students that really need them.

Cayen's Finger Scanning Attendance System gives providers and districts everything they need for efficient and accurate attendance and invoicing. Used in conjunction with Cayen SES software, finger scanning technology is a cost effective solution to ensure your data is accurate the first time – and every time.

The basic bundle includes the finger scanning unit and a Wi-Fi ready Dell Netbook that is configured with the FSAS software and scanner drivers. Boot it up, connect to the internet and you are ready to go!

Finger scanning unit and software also available separately.

- Easy to Use
- Completely Accurate
- Highly Secure
- Convenient
- Instantly Uploads to Software
- Cost Effective
- Cutting Edge Technology

Providers must receive district approval prior to set up.

ACCURATE REPORTS AND INVOICES

How FSAS Works with Your SES Program....

1. SET UP

A PC or Netbook with a finger scanner and internet access is required at the Providers location.

2. SCAN-IN

Students simply place their finger on the scanner and attendance for the student is automatically recorded. Attendance starts with the time of the scan and is tracked for the provider and session the student is enrolled in. The student then proceeds to the tutoring location for their provider.

3. SCAN-OUT

When tutoring is complete, the tutor escorts the student to the central location where they are scanned-out by the district employee.

4. UPLOAD TO CAYEN SES SOFTWARE

Student attendance times are imported into the Cayen SES Software instantly by the touch of a button. Start and end times can be rounded per district requirements to account for long lines of students waiting to scan in or out.

NOTE: Each student's finger scan must be enrolled before recording attendance (a less than one minute process per student).

BENEFITS

STREAMLINE ATTENDANCE COLLECTION

Save time by not having to create, print and record attendance on rosters only to re-enter it (by hand or with a bar code scanner) into your software later. While paper rosters can still be created and printed from the Cayen SES Software they are no longer required for attendance recording purposes.

ENSURE ACCURACY

The accuracy of the student attendance times will be significantly increased assuring more accountability for federal funds.

REDUCE INVOICE PROCESS TIME

For Districts, the time to review and process Provider invoices will be greatly reduced and simplified with FSAS. Comparison of paper attendance rosters and invoices is no longer needed. The tutoring times on the invoices are always accurate, as the finger scan requires the physical presence of the student at the specific location.
